

Super Team

Brick Wall Cyber Report

“we break malware, not hearts”

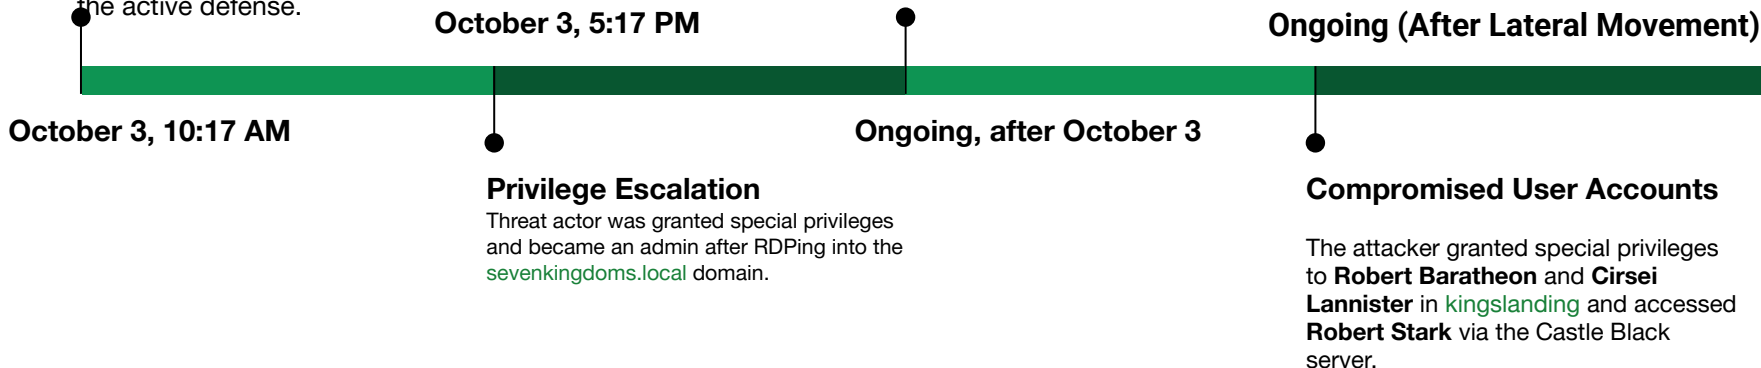

A Complete Timeline

Initial Access & Antivirus Tampering

The threat agent associated with the username (`npc-petyerbaeli`) logged into the `kingslanding` server. Around this time, the antivirus mini-filter was changed to a demand start configuration by the agent IP (`192.168.56.154`), effectively disabling the active defense.

Lateral Movement & Compromise

Petyer Baelish moved laterally to 4 servers (`kingslanding`, `braavos`, `mereen`, and `castleblack`). This was likely enabled by a change in hash keys. Unable to prove malicious activities.

A Complete Timeline, cont.

Adversary Action (Defense Evasion/Clean-up)

Registry entries deleted (on next slide)

Further privilege escalation

Every day at **12:31 PM**, special privileges are granted to a new logon on the kingslanding server.

October 8, 11:34 PM

October 9, 11:34 PM

Adversary Action (Defense Evasion/Clean-up)

Registry entries deleted again, exactly 24 hours later.

Recurring Daily since October 8

Workflow + Communication

1. Coordination for presentation planning.
2. “Sharing as we go” as our motto as Brick Wall Cyber, having a shared doc, presentation, and active communication.
3. *Main focus*: making a timeline for answering the main 4 questions.
4. *How do we know we have the right evidence*: coordination + consistencies, ruling things out, where there are connections to reach consensus.

Roles

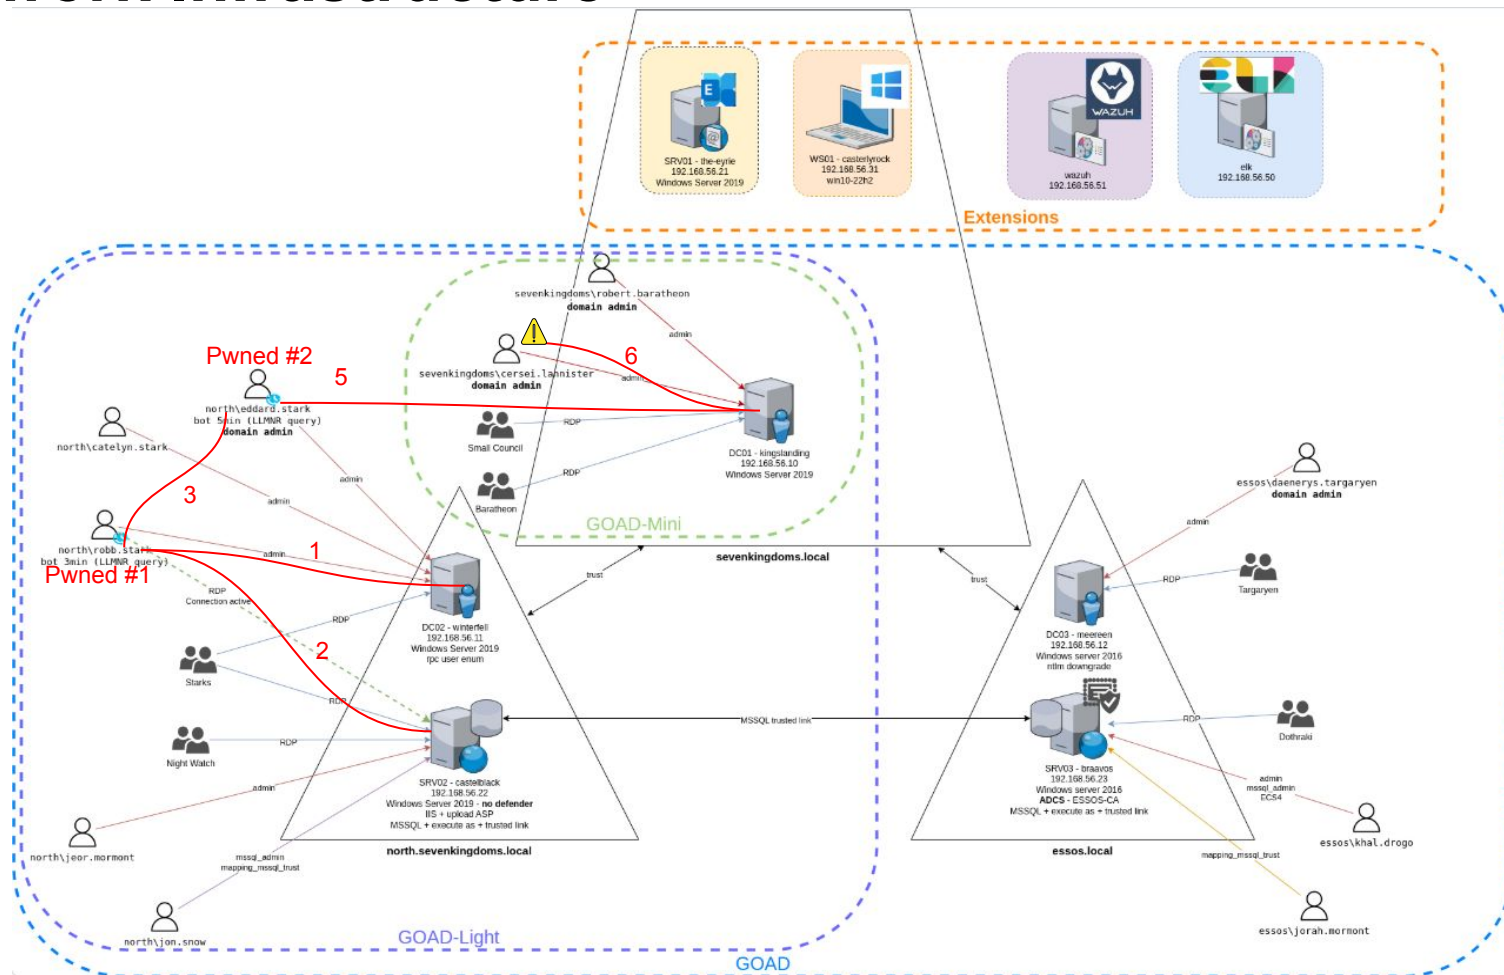

Arshia - Prompt Engineer + AI Expert: Guide and assist SIEM Experts with clues, organizing findings.

Amira & Brandon - Wazuh Experts, finding/researching into different filters, limiting the scope.

- 1 person finding what happened, other finding why (for briefing #2)

Jeff - Incident Commander: Team coordination, keeping our time in check, organizing our presentations.

Network Infrastructure

Evidence #1: Jeor Mormont Logon

User north\jeor-mormon began a brute force attack on October 3rd 10:00 as shown in figure 1 with a multitude of logon failures and gets logged out until he gets in.

Oct 3, 2025 @ 10:00:01.837	vdj-jeor-mormon	T1531	Impact	Logon Failure - Unknown user or bad password	5	60122
Oct 3, 2025 @ 10:00:04.024	vdj-jeor-mormon	T1110	Credential Access	Multiple Windows Logon Failures	10	60204
Oct 3, 2025 @ 10:00:05.523	vdj-jeor-mormon	T1531	Impact	Logon Failure - Unknown user or bad password	5	60122

DefenderRemover.exe - Github Project

Defender Remover

? What does the app do?

This application removes / disables Windows Defender, including the Windows Security App, Windows Virtualization-Based Security (VBS), Windows SmartScreen, Windows Security Services, Windows Web-Threat Service, Windows File Virtualization (UAC), Microsoft Defender App Guard, Microsoft Driver Block List, System Mitigations and the Windows Defender page in the Settings App on Windows 10 or later.

The following powershell script forcibly removes built-in Windows app that are normally non-removable. In this case, it's targeting "SecHealthUI", which is the frontend interface for Windows Defender Antivirus, Firewall, and Device Security. It marks the app as "removable" in Windows' internal policy.

- Deletes its provisioned package so new users won't get it. Deletes its installed package. And edits the registry to make the app as "deprovisioned" and "end of life"

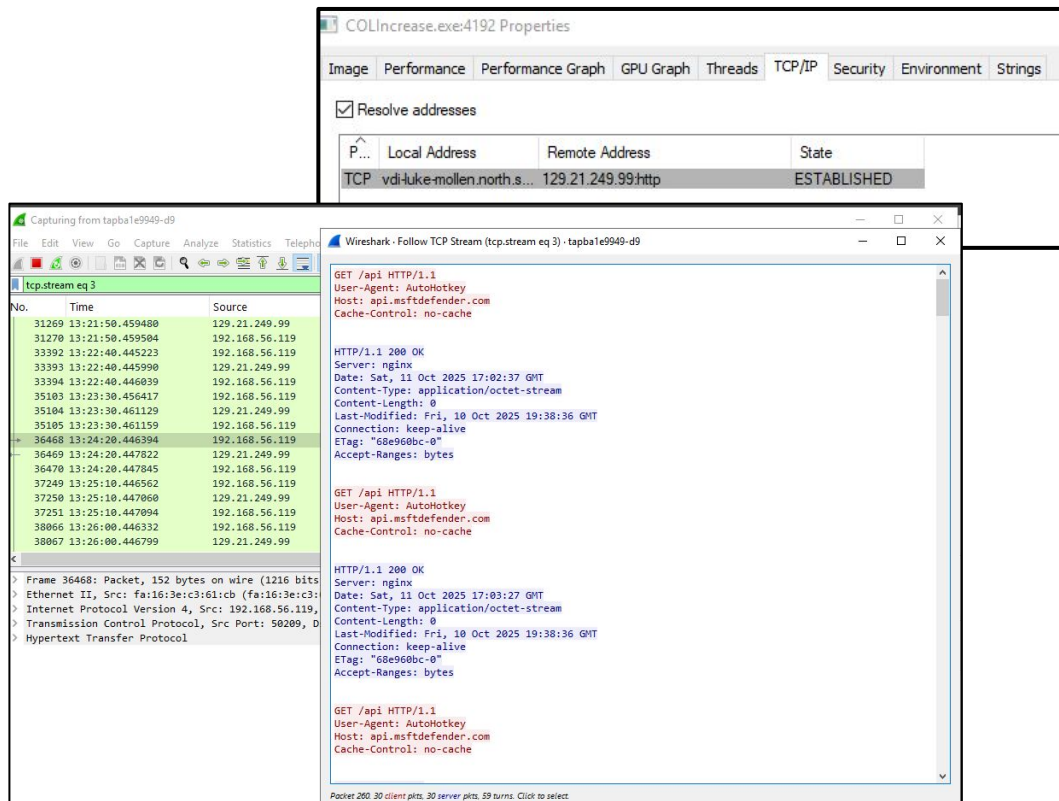

```
C:\Users\nightwatchguard\Downloads\Strings>strings.exe C:\Users\nightwatchguard\Downloads\gettingstarted

COLIncrease - appears to be a C2 beacon

- Process Explorer indicates communication from COLIncrease.exe to 129.21.249.99 via HTTP(80).
- Calls back to the attacker's server every minute through HTTP.
- It's waiting for the command from C2 from 0 byte fetch.
- Attacker could send new commands as long as the process is running.
- The process autostarts via Sysvol/Logon

NPC-petyer-baeli OU

-Suspicious OU was created for NPC-petyer-baeli. Machine was disabled within here with a unique GPO created to add a local admin account to builtin admins. I have moved the machine to the computers OU and re-enabled the device in AD

Persistence

Group Policy was found. With permission from client, we disabled the policy and left it intact for investigation. This policy was set to push out the malicious .exe

Comment:	

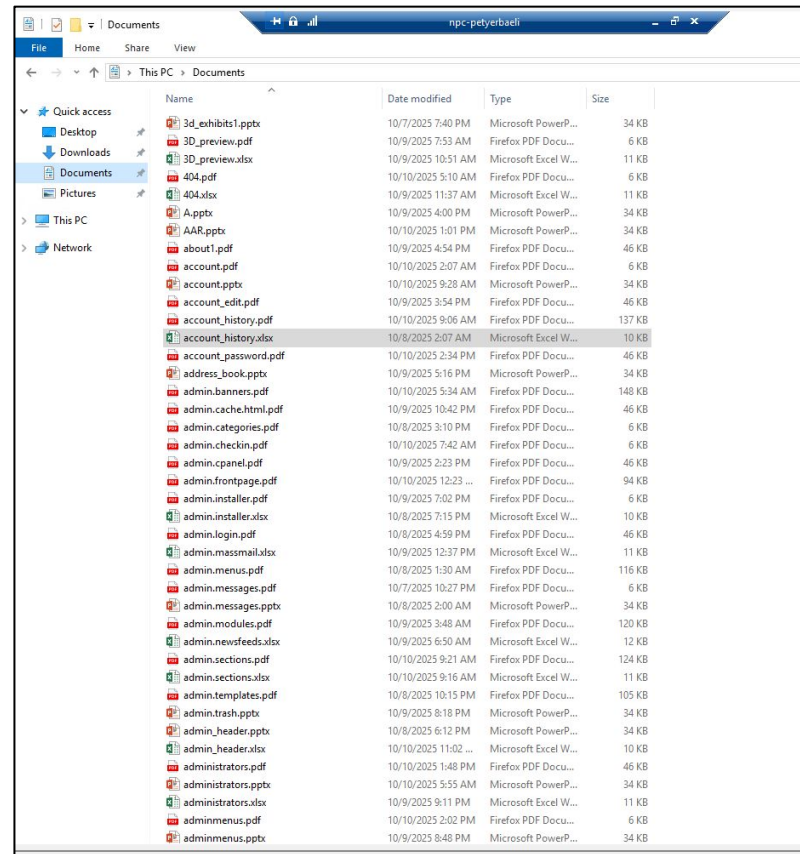

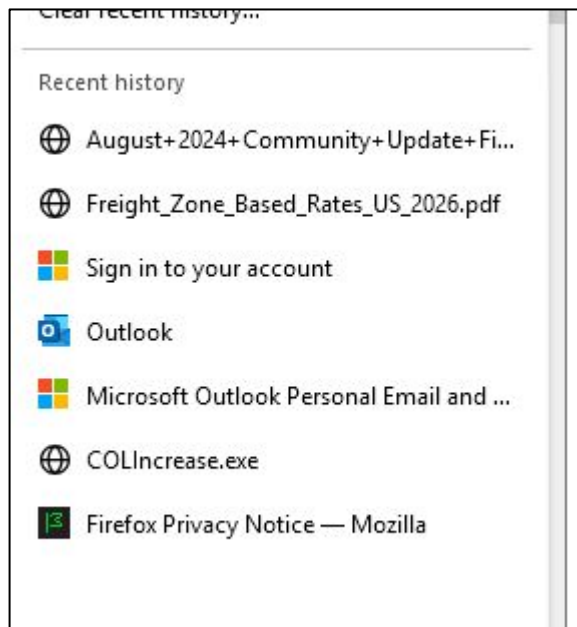

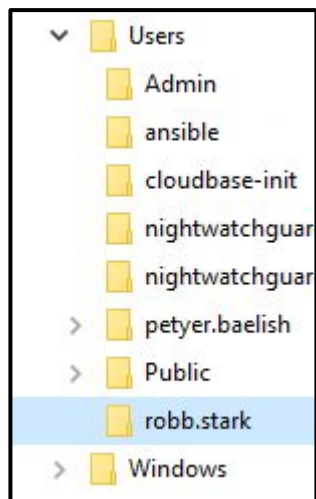

GPO Creating suspicious Local Admin Account

“LocalAdmins4” created as a local account that is a part of the builtin\Administrators account. We determined that this was a byproduct of yesterdays unauthorized actions. Policy was disabled and the team synced up.

Inside Petyer Baelish

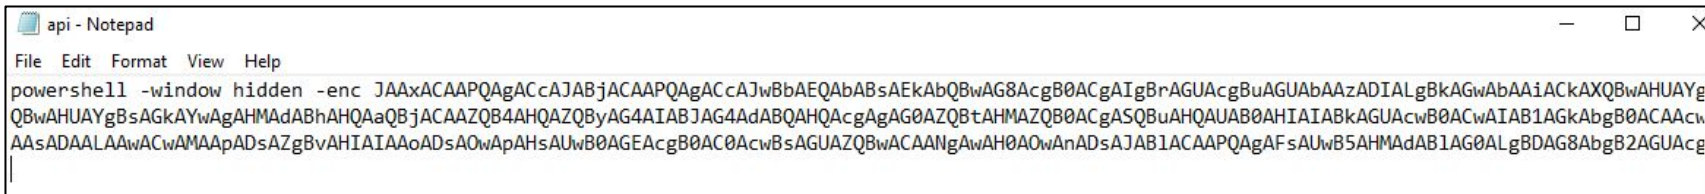

- We found all the files accessed by peter baelish attacker and browser history

Red Herring:

- A suspicious file was also found called api which had a command to run powershell with an encoded base64 text. Red herrings were also found in other locations. We suspect this to be related to “index.php” (To be referenced soon)

Recommendations

Execute long-term recommendation to protect the systems

Immediate Actions (0-4 hours)

1. **ISOLATE** npc-petyerbaeli from network immediately
2. **DISABLE** petyer.baelish account domain-wide
3. **RESET** all Small Council member passwords
4. **ENABLE** Windows Defender on npc-petyerbaeli (if still disabled)
5. **INVESTIGATE** vdi-jeor-mormon for compromised credentials
6. **COLLECT** memory dump from npc-petyerbaeli for forensics

Short-term (4-24 hours)

7. **AUDIT** all RDP connections to KINGSLANDING DC01 (last 7 days)
8. **REVIEW** Group Policy changes on sevenkingdoms.local domain
9. **SCAN** all hosts for similar Defender disablement
10. **ANALYZE** Exchange/email logs for phishing campaigns
11. **CHECK** for lateral movement to other Small Council accounts
12. **CORRELATE** petyer.baelish access with vdi-jeor-mormon brute force timing

Long-term (1-7 days)

13. **DEPLOY** MFA for all RDP connections
14. **IMPLEMENT** privileged access workstations (PAWs)
15. **RESTRICT** Small Council RDP permissions (least privilege)
16. **ENABLE** Windows Defender tamper protection (all hosts)
17. **CONFIGURE** email logging in Wazuh/SIEM
18. **CONDUCT** security awareness training (phishing focus)
19. **IMPROVE** CIS compliance scores (target: 80%+)
20. **ESTABLISH** baseline for normal petyer.baelish behavior
